

Scaffold Tissue and Nanowires Are Most Likely the Cause of Sudden Adult Death Syndrome, says Dr. Ariyana Love

BY RHODA WILSON ON JUNE 28, 2022

<https://expose-news.com/2022/06/28/scaffold-tissue-and-nanowires-most-likely-cause-sads/>

As evidence of rubbery “blood clot” samples pulled out of veins and arteries of “vaccinated” deceased by embalmers continues to be revealed and analysed, a little over a week ago Dr. Ariyana Love gathered her research relating to tissue scaffolding and nanowires which led to some conclusions.

“The samples pulled out of the veins and arteries of Covid vaccinated corpses shocked the world and exposed that something more than just “vaccination” is happening with the Covid vaxx,” Dr. Love wrote.

Reviewing images shown by Mike Adams of synthetic tissue growing inside people after being injected with Covid “vaccines,” she said, “this is most likely the cause of ‘Sudden Adult Death Syndrome.’”

by Dr. Ariyana Love

The **samples pulled out of the veins and arteries** of Covid vaxxed corpses shocked the world and exposed that something more than just “vaccination” is taking place.

In my latest interview with Stew Peters entitled, **Human Umbilical Cord Being Injected In Kids: Tissue Scaffolding Technology In Covid Jab**, I revealed in detail what the strange “blood clot” samples found by embalmer Richard Hirschman, actually are. The story was first aired by Dr. Jane Ruby on **Stew Peters Show** in January and was recently examined LIVE on air by scientist Mike Adams in the InfoWars studio, in a **worldwide medical bombshell**.

The **samples pulled out of the veins and arteries** of Covid vaccinated corpses shocked the world and exposed that something more than just “vaccination” is happening with the Covid vaxx. The fact that mainstream media did not pick up on this story is more proof we’re in dystopian times.

These images show synthetic tissue is being grown inside humans from the Covid vaxx. This is most likely the cause of “Sudden Adult Death Syndrome.” Please see the following studies:

- **Tissue-Engineered Blood Vessels (2005)**
- **Researchers Grow New Blood Vessels in Just Seven Days (2014)**
- **Arterial reconstruction with human bioengineered acellular blood vessels in patients with peripheral arterial disease**
- **From Autologous Flaps to Engineered Vascularized Grafts for Bone Regeneration**
- **China constructing blood vessels (2020)**
- **Bioactive polymeric scaffolds for tissue engineering**

Below are images of artificially grown blood vessels by lab scientists.

There are synthetic and **natural polymers**. They are elastic and made from these five different materials:

1. **Polyester polymers PLLA and PGA** are among the most commonly used biodegradable **synthetic polymers**.
2. **Silk fibroin** protein is extruded from insects and worms. It has biocompatible properties with the human body and possesses relatively high tensile strength.
3. **Collagen** is used for bone construction.
4. **Hyaluronic acid (HA)** is a form of hydrogel material for both hard and soft tissue construction.
5. **Chitosan** is a biodegradable **polysaccharide** that comes from **chitin** via chemical hydrolysis. It's used in a gel, sponge, or fibre form.

I believe the below image from the embalmer and published by InfoWars, is a Silk fibroin tissue construct. Certified embalmer Richard Hirschman's sample – InfoWars →

Nanowires

Nanowires are being used for the hybridization of humans. Pharmaceutical companies and world governments are attempting to grow artificial tissue inside humans...
