

# 5 reasons to believe the global population is already one billion people less than it was in January 2020

TheCOVIDBlog.com, April 20, 2023 (updated April 21, 2023)

[thecovidblog.com/2023/04/20/5-reasons-to-believe-the-global-population-is-already-one-billion-people-less-than-it-was-in-january-2020/](https://thecovidblog.com/2023/04/20/5-reasons-to-believe-the-global-population-is-already-one-billion-people-less-than-it-was-in-january-2020/)

***CCPO Note:** As discussed in Reason 1 below, one statistic being used to evaluate the impact of the COVID experimental mRNA injections is excess mortality (excess deaths), the number of deaths during a particular period above the usual, expected number under normal conditions ([dictionary.cambridge.org/dictionary/english/excess-mortality](https://dictionary.cambridge.org/dictionary/english/excess-mortality)). Life insurance companies use statistical analysis to forecast life expectancies and then base their insurance rates on these estimates. When there is excess mortality, they see a demand for benefits payout beyond what they had estimated, which has been the case since the rollout of the COVID injections. For another analysis of excess mortality associated with the COVID injections, see: [lewrockwell.com/2022/03/no\\_author/edward-dowd-on-future-recession-shocking-findings-in-the-cdc-covid-data-and-democide/](https://lewrockwell.com/2022/03/no_author/edward-dowd-on-future-recession-shocking-findings-in-the-cdc-covid-data-and-democide/).) We may well be witnessing a foreshadow of the horrific death toll spoken of in [Revelation 6:8](#) and [9:15](#).*

The general consensus was that there were [7.84 billion people on Earth in January 2020](#). The United Nations reported that the global population [eclipsed the 8 billion mark in November 2022](#). As of publishing, [Worldometer has the current global population at 8.028 billion](#). There have been 40 million births and 20 million deaths, for a net population growth of 20 million thus far in 2023, according to the same source. The only people who believe any of the foregoing also believe that men are really women, and vaccines are safe and effective.

As of March 2023, there are [two jobs available in the U.S. for every one unemployed worker](#). You don't even need the [ADP Workforce Vitality Reports](#) to know that wages [have been at all-time highs since Q4 2021](#). Just look around your local area, and you'll see McDonald's, Kum and Go, Circle K, Walmart, and all those former minimum wage jobs hiring at \$15 per hour and up. They are forced to offer higher wages (or hire illegal immigrants) to entice what's left of the U.S. workforce. The U.S. Chamber of Commerce [acknowledged the ongoing labor shortage earlier this month](#). If every unemployed person got a job tomorrow, there would still be 4 million job openings. Mainstream media continually [blame #ABV](#) for this two years and counting labor dearth. (RELATED: [Washington Post caught telling the truth – “vaccines” do in fact lower the risk of hospitalizations because vaccinated people are dying too fast](#) (November 25, 2022))

The bottom line is that millions of Americans have died or are severely maimed from the lethal mRNA and viral vector DNA injections, and physically cannot work. Further, U.S. birth rates in 2021 were the [lowest since World War I](#). You cannot find a straight answer anywhere as to 2022 U.S. birth rates. They now [“splain” it as fertility rates](#) and ramble on about 2015-2019 [instead of just giving straight statistics about birth rates in 2022](#).

It's not just the United States. *The COVID Blog®* is confident in declaring that the global population has dropped from 7.8 billion in January 2020 to 6.8 billion today – about a 13% drop in 28 months since the vaccine rollout. The powers-that-be (“TPTB”) will never report the truth on this, and will do everything to conceal, manipulate and distort the real numbers. So all we can do is crunch everything we know to determine the progress of their goal – [500 million humans left on Earth by 2030](#). Former Malaysia Prime Minister Mahathir Mohamad fearlessly blew the whistle on the [depopulation agenda](#) in 2015. We posited in August 2022 that the [world population would be down to 4.5 billion by the end of 2024](#). It does not take a giant leap to accept that the world population is down to 6.8 billion today (from 7.8 billion in January 2020) because of the following five phenomena.

## 1. Numerous countries reported record excess deaths, record-low births in 2021 and/or 2022.

Governments are in the business of lying, particularly about crime and population statistics to fit agendas...
