

# Pfizer Vaccine Batches in the EU Were Placebos, Say Scientists

By Daily Sceptic, June 29, 2023

*Note from Pastor Kevin Lea: Mounting evidence clearly indicates that big pharma used human beings as lab rats during the Covid plandemic experiment. Those who took the jab and suffered no side effects should praise Jesus that they received a placebo (saline solution) instead of the actual experimental mRNA injection, which programs the body to produce the toxic spike within our cells. Those who were deceived into believing the “safe and effective” lies of the government, media, Pentagon, health authorities and pharmaceutical companies can be thankful that they are still alive – even though many are maimed already – and therefore able to call upon the name of the Lord Jesus for forgiveness and eternal salvation if they haven’t done so already.*

*We are all going to die someday, and clearly Pfizer (and others) had no conscience about helping millions go to the grave early in a global pharma-scam that reaped billions in profits for them. Most people were quick to put their faith in man’s promises as they rolled up their sleeves to be “saved” from physical death. Very few people are willing to put their faith in their Creator who offers eternal salvation of the soul as a free gift if they trust in Jesus as their Savior. Jesus died on the cross to give life to all who come to Him and proved He is not scamming us by raising from the grave. Jabbed or not, physical death is coming to you soon. Don’t miss the opportunity to run to Jesus for eternal salvation while there is still time.*

*Jesus’ words as they apply to Pfizer/Fauci, et al:*

“You are of your father the devil, and the desires of your father you want to do. He was a murderer from the beginning, and does not stand in the truth, because there is no truth in him. When he speaks a lie, he speaks from his own resources, for he is a liar and the father of it. But because I tell the truth, you do not believe Me” John 8:44-45 (NKJV).

*Jesus’ words to you:*

“I am the door. If anyone enters by Me, he will be saved, and will go in and out and find pasture. The thief does not come except to steal, and to kill, and to destroy. I have come that they may have life, and that they may have it more abundantly. “I am the good shepherd. The good shepherd gives His life for the sheep” John 10:9-11 (NKJV).

“All things have been delivered to Me by My Father, and no one knows the Son except the Father. Nor does anyone know the Father except the Son, and the one to whom the Son wills to reveal Him. Come to Me, all you who labor and are heavy laden, and I will give you rest. Take My yoke upon you and learn from Me, for I am gentle and lowly in heart, and you will find rest for your souls. For My yoke is easy and My burden is light” Matt 11:27-30 (NKJV).

“The Father loves the Son, and has given all things into His hand. He who believes in the Son has everlasting life; and he who does not believe the Son shall not see life, but the wrath of God abides on him” John 3:35-36 (NKJV).

*Will you be one to receive everlasting life? If you are unsure, please see “Normal” isn’t coming back, Jesus is”*

---

**Scientists have uncovered startling evidence that a substantial portion of the batches of the Pfizer-BioNTech COVID-19 vaccine deployed in the European Union may in fact have consisted of placebos – and that the German regulator knew this and did not subject them to quality-control testing.**

The scientists, Dr. Gerald Dyker, Professor of Organic Chemistry at the Ruhr University Bochum, and Dr. Jörg Matysik, Professor of Analytical Chemistry at the University of Leipzig, are part of a group of five German-speaking scientists who have been publicly raising questions about the quality and safety of the BioNTech vaccine (as it is known in Germany) for the last year and a half.

They recently appeared on the *Punkt.Preradovic* online programme of the German journalist Milena Preradovic to discuss batch variability. Their starting point was the recent Danish study showing enormous variation in the adverse events associated with different batches of the Pfizer-BioNTech vaccine, or BNT162b2 per its scientific codename. The below figure from [the Danish study](#) illustrates this variation.

It shows that the batches used in Denmark, which are represented by the points in the graph, essentially break down into three groups.

The ‘green batches’ clustered around the green line have a moderate or moderately-high level of adverse events associated with them. In the discussion with Preradovic, Gerald Dyker takes the example of the green point furthest to the right. As he explains, it represents the batch that was the used the most in Denmark, with somewhat over 800,000 doses having been administered. These 800,000 doses are

associated with around 2,000 suspected adverse events, which gives a reporting rate of one suspected adverse event per approximately 400 doses. As Dyker puts it, “That’s not a small amount if we compare to what we know otherwise from influenza vaccines.” According to Dyker’s calculation, the green batches account for more than 60% of the Danish sample.

There are then the ‘blue batches’ clustered around the blue line, which are obviously associated with an extraordinarily high level of adverse events. As Dyker notes, no more than 80,000 doses of any of the blue batches were administered in Denmark – suggesting that these especially bad batches may perhaps have been quietly pulled from the market by public health authorities.

Nonetheless, these batches had as many as 8,000 suspected adverse events associated with them. Eight thousand out of 80,000 doses would give a reporting rate of one suspected adverse event for every 10 doses – and Dyker notes that some of the blue batches are indeed associated with a reporting rate of as high as one suspected adverse event for every *six* doses! On Dyker’s calculation, the blue batches represent less than 5% of the total number of doses included in the Danish study. Nonetheless, they are associated with nearly 50% of the 579 deaths recorded in the sample.

Finally, we have the ‘yellow batches’ clustered around the yellow line, which, as can be seen above, barely gets off the x-axis. On Dyker’s calculation, the yellow batches represent around 30% of the total. Dyker notes that they include batches comprising some 200,000 administered doses which are associated with literally *zero* suspected adverse events. As Dyker puts it, “malicious” observers might note that “this is how placebos would look.”

And malicious observers might be right. For Dyker and Matysik compared...
